

Date picker improvement for Portal forms

What has changed?

'Time' icon is more visible when selecting a date and time for portal forms

Why has it changed?

The time icon is very hard to find so most end users don't select it. When users don't select a time, the default time applied would be the current time, for example, if a notification is submitted at the end of the day, then it implies the work will start on that day and time

Benefits

- The Date and Time on a date field is now easier to find, so that the risk of supplying an incorrect date or time is minimised
- Accurate capture of when the notification was received and when the work starts
- Reduction in the number of 'clicks' to enter a single date and time
